mindmap[ai]

MINDMAP OS | FORWARD DEPLOYED ENGINEERS | SOVEREIGN AI | 50+ ENTERPRISE CUSTOMERS

AI that moves in with you. Your data never moves out.

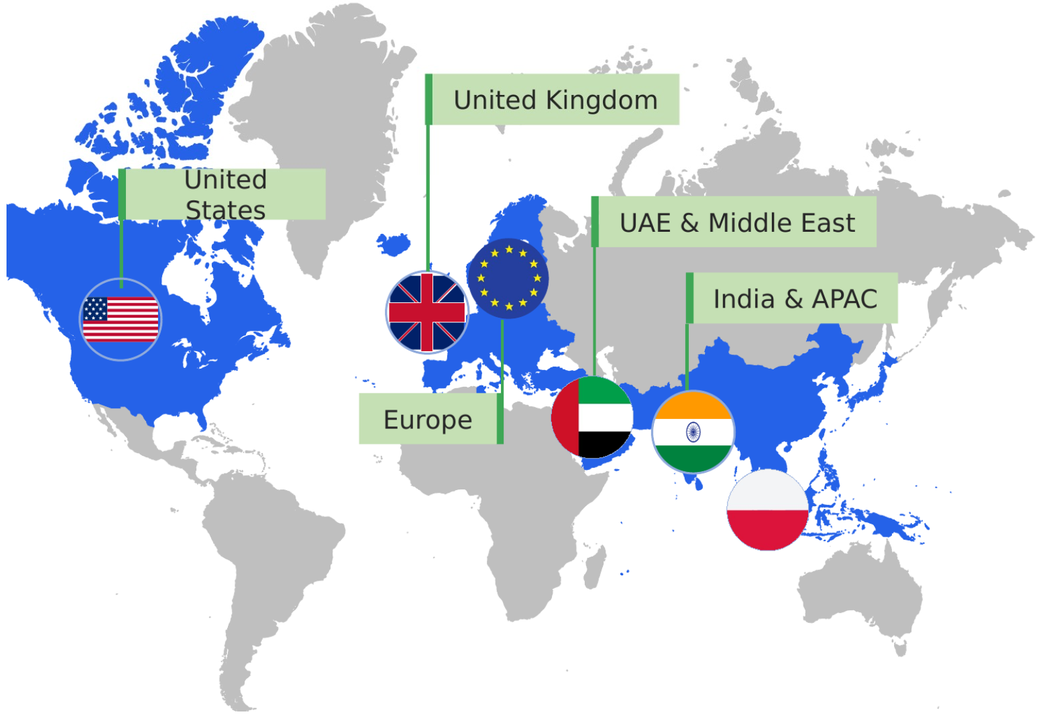

MindMap OS — 117 accelerators and five sovereign model families, installed inside your perimeter by forward deployed engineers, and paid for on results.

One of the few firms globally that can assess, build, deploy and scale Sovereign AI across every business function — with forward deployed engineers, built and installed on three continents

From strategy to shipped systems running inside the customer's perimeter — engineers forward-deployed under one roof, accountable for the result. We call it 360° AI Transformation.

50+
enterprise customers
across 10 industries

117
accelerators
in the MindMap OS library

184
forward deployed engineers
inside client perimeters, 5 countries

THE PROBLEM

Everything you type goes somewhere else.

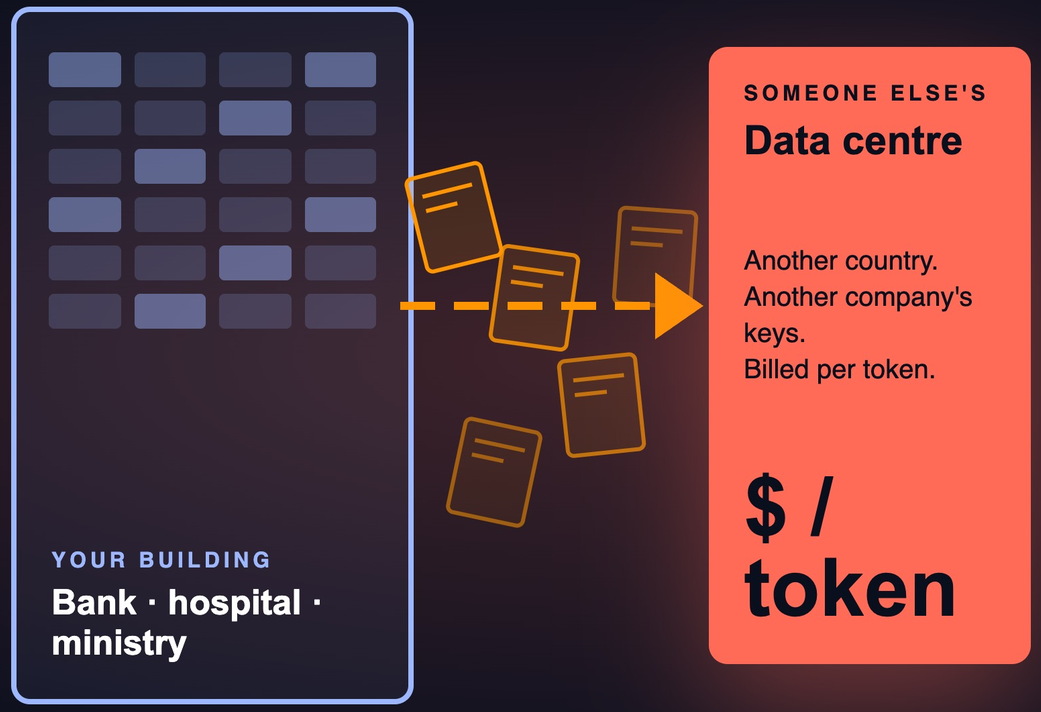

Every prompt, every document, every customer record — shipped to a data centre you do not own, in a country you did not choose, **metered by the token.**

A bank
cannot upload its customers.

A hospital
cannot email your medical history.

A government
should not even be asked.

A large corporate
cannot paste its contracts, pricing and payroll into a public chatbot.

THE MARKET REALITY

Everyone wants AI. In regulated industries, the data can't leave the building.

Banks can't upload their customers to the cloud.

RBI LOCALISATION · DPDP · SAMA

Hospitals can't email your medical history to a chatbot.

HIPAA · ABDM · NHA POLICY

Governments …really shouldn't.

SOVEREIGN PROCUREMENT RULES

Large corporates can't hand contracts, pricing and payroll to a public model.

BOARD RISK · TRADE SECRETS · GDPR / DPDP

THE BAD CHOICE TODAY

OPTION A

Use foreign APIs anyway

Data leaves the building — and the country. Metered by the token, in someone else's cloud.

$ / TOKEN

OPTION B

Or build it yourself

18 months, a GPU cluster and a team you can't hire.

18 MONTHS

~~A wall.~~ **A moat.**

Sovereign AI is not a feature we bolted on. It is the architecture — since inception.

If nothing leaves the building, there is nothing to leak — and nothing to rent. That is the whole company.

Regulatory drivers: DPDP Act & Rules 2025 (India) · RBI payment-data localisation · SAMA · HIPAA · GDPR.

PRESENTING

MindMap
Sovereign AI

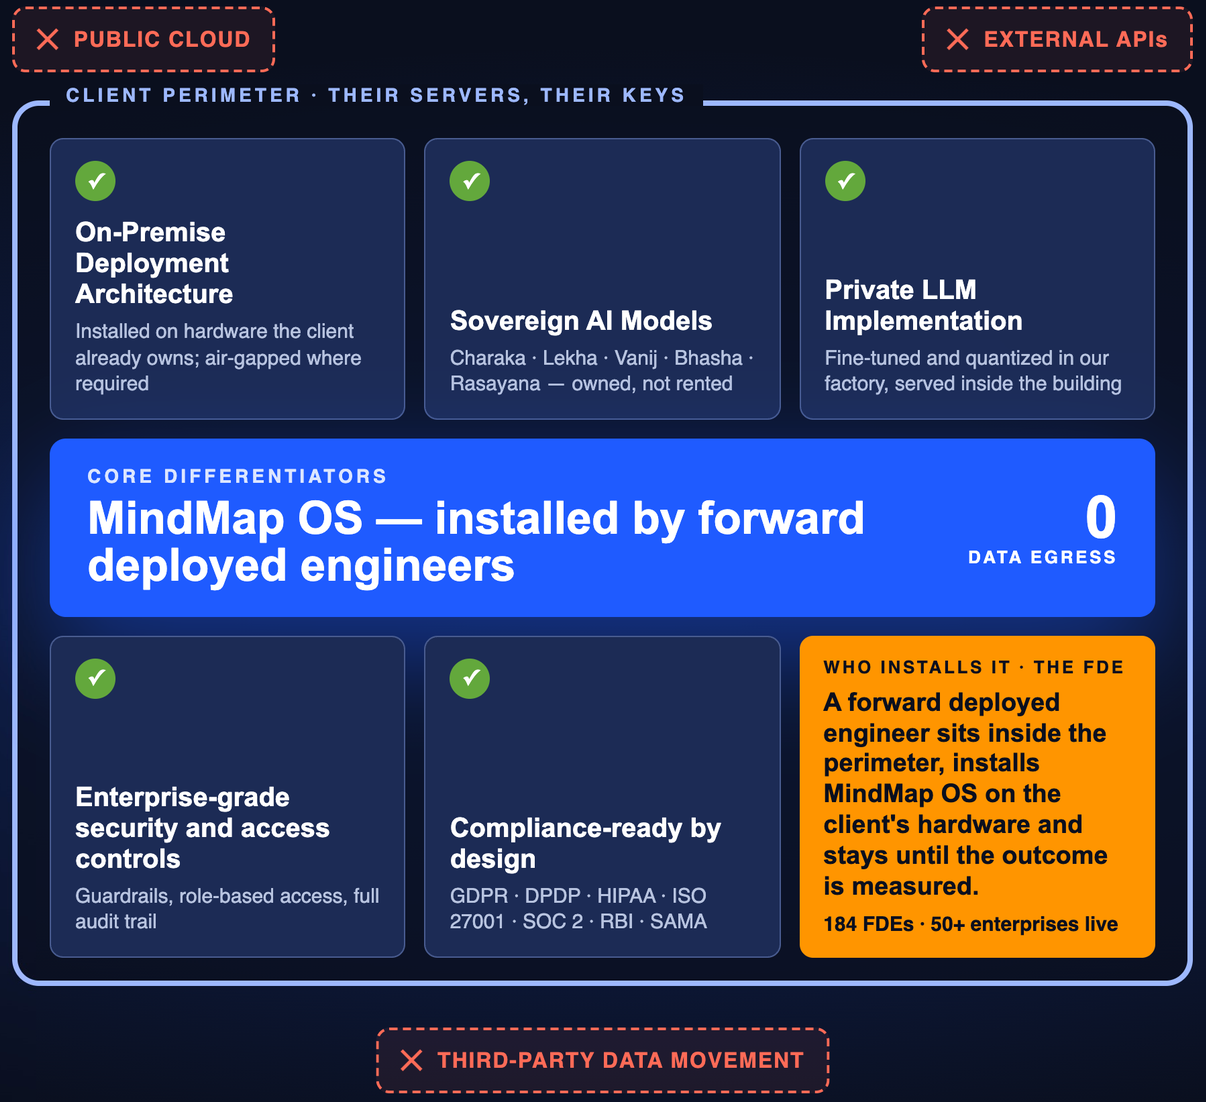

Designed for enterprises where data cannot leave internal servers.

01 **No** public cloud dependency

02 **No** external APIs

03 **No** third-party data movement

> All AI models, workflows and intelligence operate **within the client's own infrastructure** — installed and run by **forward deployed engineers**: our engineers, embedded on the client's network, who bring the IP back to the OS library.

HOW WE WORK · FORWARD DEPLOYED ENGINEERS

Our engineers work inside your walls — and stay until the number moves

A forward deployed engineer (FDE) is a MindMap engineer embedded on your network, installing MindMap OS on your hardware and owning the outcome with your team. Nothing leaves the building; what we learn comes home as reusable IP.

YOUR PERIMETER

01
Embed
An FDE pod joins your team, on your network, under your access controls.

→

02
Install
MindMap OS accelerators and the right model family configured to your data — live in 6–9 weeks.

→

03
Operate
Runs, measures and hands exceptions to people. Hypercare until the outcome is signed off.

→

04
Compound
The pattern returns to the MindMap OS library — so your next process goes live faster.

184 forward deployed engineers

6–9 wks to production, not 6–9 months

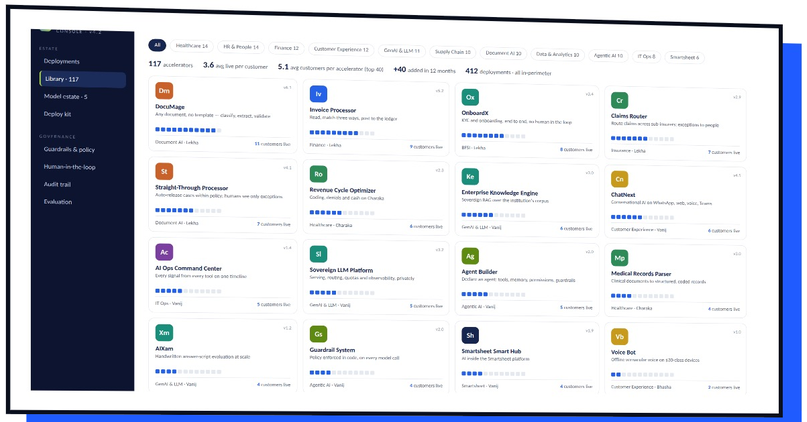

3–4 accelerators live per customer

~100% logo retention

THE PRODUCT

MindMap OS: one operating system, three integrated layers. Installed, not accessed.

Every model and accelerator ships as versioned components installed into the customer's own stack, on hardware they already own.

01

The Library

117 ACCELERATORS

Finished work — invoices, claims, KYC, clinical records, procurement, examinations. Deployed by configuration, not construction.

Billed per outcome or transaction

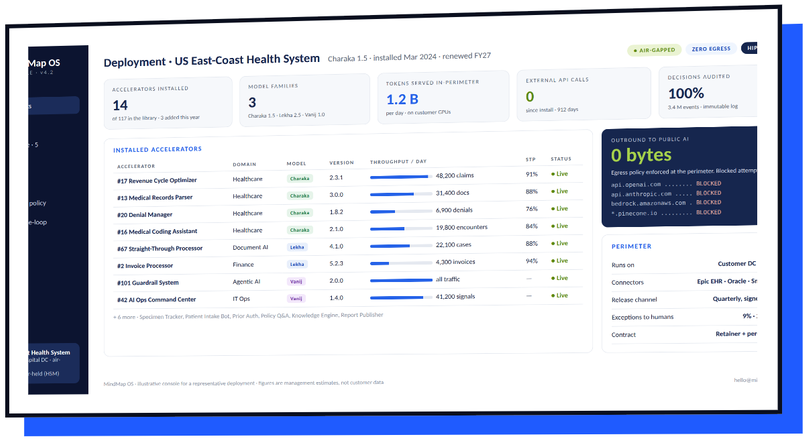

02

The Model Estate

FIVE MODEL FAMILIES

Charaka · Lekha · Vanij · Bhasha · Rasayana. Domain-born models, tuned and quantized in our own factory, owned outright.

Subscribed by domain

03

The Deploy Kit

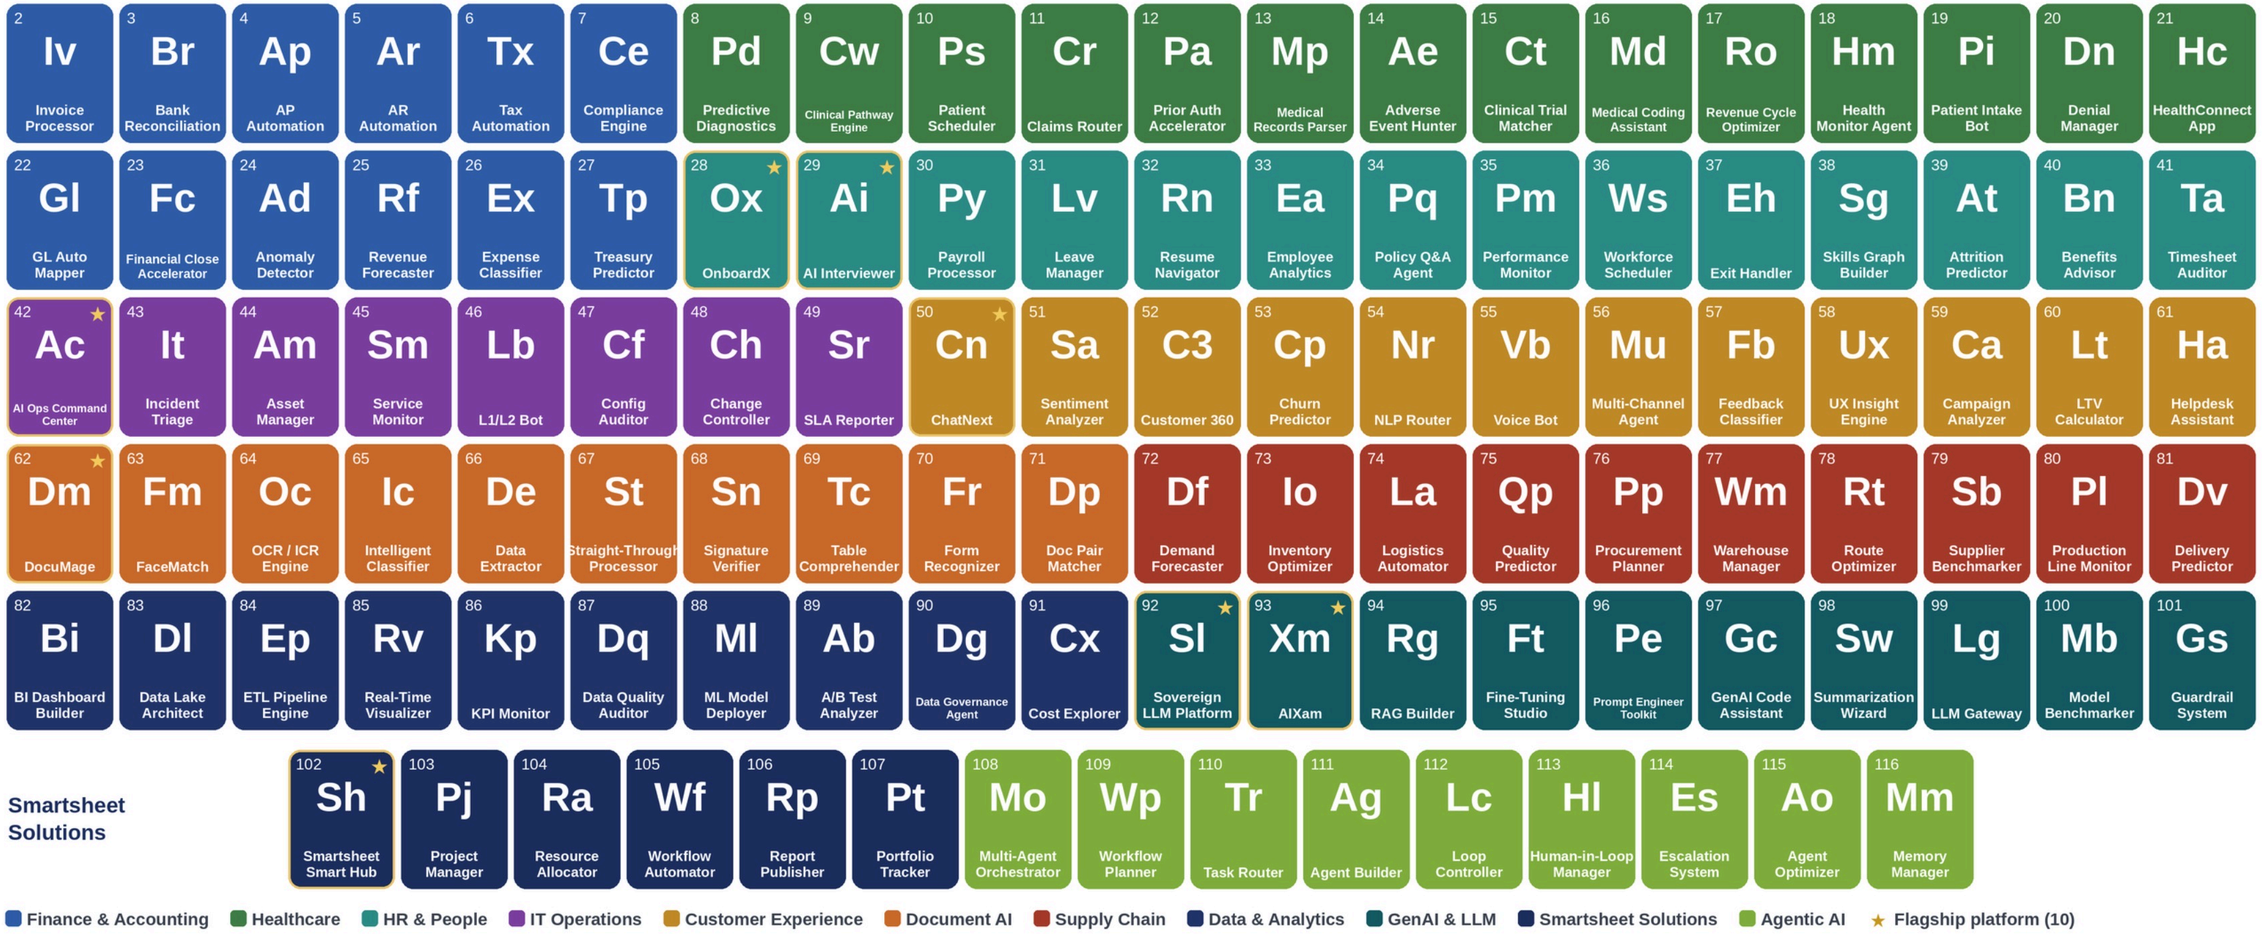

CONNECTORS · GUARDRAILS · AUDIT

Serving, routing, memory, observability and a full audit trail — installed into SAP, Oracle, ServiceNow, Smartsheet, hospital and bank perimeters.

Annual licence, renewed

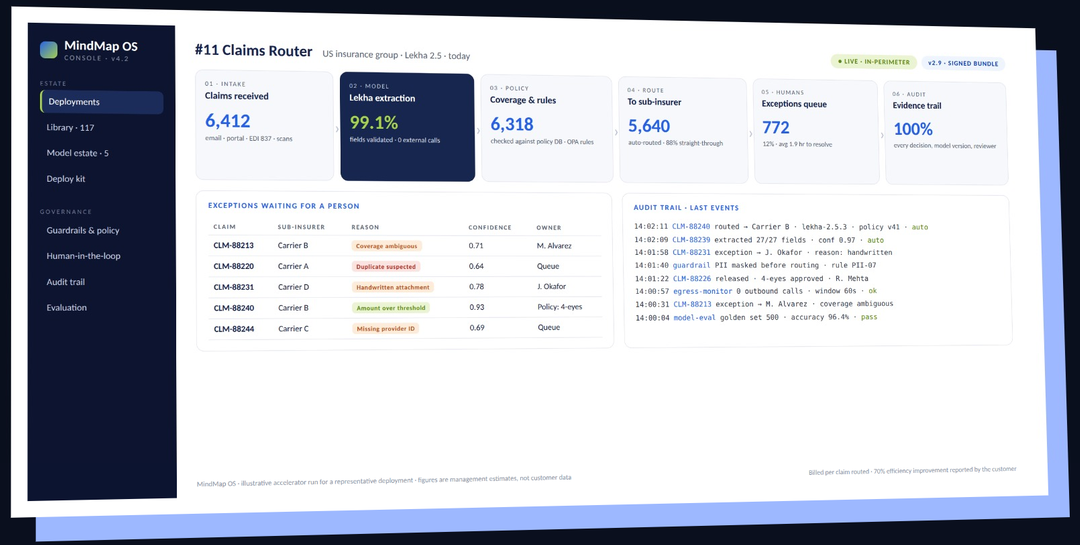

THE LIBRARY

117 finished workflows, arranged by domain

ANATOMY OF AN ACCELERATOR

Anatomy of an accelerator: finished work, deployed by configuration

Claims Router (#11) running inside a US insurance group — one of 117. Illustrative MindMap OS console; customer screens are not reproduced.

6,412 claims today

88% straight-through

12% to humans

0 external calls

Domain model

Lekha — the BFSI family — reads the claim and every attachment; no public API in the path.

Workflow logic

Coverage and rules checked, then routed to the right sub-insurer — 88% straight-through.

Connectors

Policy DB · EDI 837 · email · portals · SAP · EHR · core-banking — built once, reused everywhere.

Guardrails + human-in-the-loop

Exceptions routed to people; policy enforced in code, not in training.

Audit & observability

Every decision logged inside the perimeter — the regulator's evidence trail.

Every accelerator = domain model + workflow logic + connectors + guardrails + audit

117 IN THE LIBRARY

HOW AN ACCELERATOR WORKS

Every accelerator runs the same five-stage loop — inside your perimeter

01 Ingest
Documents, emails, portals, ERP and EHR records pulled through pre-built connectors.

→

02 Understand
The domain model reads, classifies and extracts — text, tables, handwriting, voice.

→

03 Decide
Business rules and policy checks applied; confidence scored on every item.

→

04 Act
Posts to SAP, routes the case, replies to the customer — or hands an exception to a person.

→

05 Audit
Every decision logged with its evidence, inside the perimeter, for the regulator.

A FEW OF THE 117 · WHAT THEY DO

DOCUMENT AI
DocuMage
Reads any business document — invoices, contracts, forms — and returns structured data.

100K+ invoices touchless

INSURANCE
Claims Router
Checks cover and rules, then routes every claim to the right sub-insurer or desk.

88% straight-through

BANKING
OnboardX
End-to-end KYC and onboarding: ID, licence, sanctions and source-of-funds.

98% STP

PRIVACY
Redacto
Finds and masks personal and confidential data before any document moves.

Zero data exposure

EDUCATION
AIXam
Evaluates handwritten answer scripts against the marking rubric.

Exam cycles in days, not weeks

CUSTOMER EXPERIENCE
ChatNext
Sovereign assistants on WhatsApp, web and voice — in English and local languages.

6 M+ customers served

HEALTHCARE
Revenue Cycle Assist
Codes claims, flags denials and tracks specimens across the hospital.

$400K leakage recovered

BUSINESS LINE 1 · AI CENTRE OF EXCELLENCE

We become your AI team — inside your perimeter

A multi-year partnership run by a forward deployed pod: roadmap, build, operation and governance of AI across a function, then the enterprise.

A dedicated FDE pod
Engineers, domain leads and a delivery owner embedded with your teams.

A prioritised AI roadmap
Use cases ranked by measurable value, not by novelty.

Accelerators, not blank pages
117 finished workflows and five model families to start from.

Governance built in
Guardrails, audit trail and human-in-the-loop mapped to your regulator.

Live today in healthcare, insurance and banking — the longest-running CoEs are now in their fourth year.

BUSINESS LINE 2 · SERVICE-AS-A-SOFTWARE

You buy finished work, not software seats

Our accelerators deliver completed outcomes — an invoice processed, a claim routed, a customer onboarded — and we are paid per unit of work done.

ERA 1	ERA 2	ERA 3 · MINDMAP
Licensed software	**SaaS**	**Service-as-a-Software**
You buy the tool	You rent the tool	You buy the outcome

BILLED PER INVOICE

Touchless accounts payable

Capture, match and post to SAP or Oracle — exceptions routed to people.

36K+ invoices / quarter at a US telecom

BILLED PER CLAIM

Claims routing

Read the claim and every attachment, check cover, route to the right desk.

88% straight-through at a US insurer

BILLED PER CUSTOMER

Onboarding & KYC

ID, licence, sanctions and source-of-funds checks inside the bank's perimeter.

98% STP · 4-minute median onboarding

BILLED PER SCRIPT

Examination evaluation (AIXam)

Handwritten answer scripts scored against the rubric at scale.

Thousands of scripts per exam cycle

BILLED PER DOCUMENT

Redaction & document AI

Personal and confidential data found and masked before it moves.

Masked before any data moves

BILLED PER CASE

Collections & recovery

Prioritise, contact and reconcile — a 7-day cycle cut to 1.

7 → 1 day cycle time

BUSINESS LINE 3 · SOVEREIGN MODEL FAMILIES

Five named model families. Four in production, a fifth in development.

Fine-tunes of permissively-licensed open-weight bases, quantized in-house, deployed inside client perimeters. Product-line brands for domain fine-tunes — not claims to from-scratch pretraining.

FAMILY	DOMAIN	TUNED FOR	RUNS ON	WHERE IT RUNS TODAY	STATUS · GO-LIVE	NEXT RELEASE
MindMap Charaka 1.5	Healthcare	Clinical documents, revenue-cycle, specimen & diagnostics workflows — HIPAA-grade, in-perimeter	Hospital DC / private cloud	US East-Coast hospital system ($6.5 Bn)	Live & stable · since Q3 FY25	Charaka 2.0 · Q4 FY27 — imaging reports, discharge summaries
MindMap Lekha 2.5	BFSI	Onboarding, KYC, fraud signals, claims straight-through processing, invoices	Bank perimeter / private cloud	UAE digital bank; US insurance carrier	Live & stable · since Q1 FY25	Lekha 3.0 · Q2 FY27 — credit memos, AML narratives
MindMap Vanij 1.0	Enterprise ops · retail & consumer	Procurement, vendor and supply-chain documents; SAP + ServiceNow orchestration; agentic workflows	Client VPC / on-prem	Global beauty-products manufacturer (US & EU)	Limited production · GA Q3 FY27	Vanij 1.5 · Q1 FY28 — multi-agent procurement
MindMap Bhasha 1.0	Indic voice & vernacular	Offline voice Q&A in Indian languages on $30-class devices — no internet, no latency	Edge devices, fully offline	Govt of Maharashtra — 16,000-school RFP, in evaluation	Proof of concept · pilot Q4 FY27	Bhasha 2.0 · FY28 — 12 languages, on-device fine-tuning
MindMap Rasayana	Pharma & life sciences	Adverse-event detection, trial matching, batch-release QA	Client VPC / on-prem	Global pharma QA/QC pilot	In development · first deployment Q2 FY28	—

R&D FOCUS · FY27–FY28

- Provenance register per deployment — base model, version, licence
- Agentic orchestration: families call each other inside the perimeter
- Distil every family to a 4-bit edge build that runs on a single client GPU
- Shared guardrail and evaluation layer across all five families

WHAT'S NEXT · CANDIDATE FAMILIES

Nyaya — legal & contracts (FY28)

Drishti 2.0 — vision engine promoted to a family (FY28)

Shiksha — assessment & skilling, from AIXam (FY28)

Karma — public-sector procurement, from the Ghana build (FY29)

Named families ride Apache-2.0 / MIT-class bases; base model, version and licence per deployment are tracked in a provenance register. Accelerator binding: 67 on Vanij, 15 on Lekha, 12 on Charaka, plus vision (Drishti) and automation (Yantra) engines. Dates are management targets.

BUSINESS LINE 4 · INDUSTRY SOLUTIONS

Built for the industries where data cannot leave

Each industry runs on its own model family and a set of proven accelerators — so a new deployment starts from what already works.

Banking & insurance

LEKHA MODEL FAMILY

- Customer onboarding & KYC
- Claims straight-through processing
- Fraud signals & credit memos
- Sovereign WhatsApp banking

98%

straight-through onboarding at a UAE digital bank

Healthcare & pharma

CHARAKA · RASAYANA

- Revenue cycle & denials
- Clinical documents & specimen tracking
- QA/QC batch release
- Adverse-event detection

628%

ROI on QA/QC batch release at a global pharma

Government

BHASHA · LEKHA

- Tax-policy assistant for officers and citizens
- Tender value-for-money scoring
- Trade-licence verification
- Offline Indic voice Q&A

+31%

compliance-yield uplift at an African tax authority

Enterprise

VANIJ MODEL FAMILY

- Touchless AP & SAP invoicing
- Procurement & vendor documents
- Collections automation
- SAP + ServiceNow agentic workflows

100K+

invoices processed touchless at an OEM manufacturer

SERVICES & PRACTICES

Beyond the OS: the engineering practices behind it

The same engineers who build MindMap OS run eight practices your teams can engage directly — on their own, or alongside an AI programme.

Test automation 01

Enterprise test automation for SAP and packaged apps — now extended with agentic test libraries.

Worksoft · SAP · Tricentis

RPA & intelligent automation 02

Bots and document AI that clear back-office queues — the practice MindMap was founded on.

UiPath · Automation Anywhere · Power Automate

Data & analytics 03

Data lakes, warehouses and dashboards that give AI clean, governed data to work on.

Snowflake · Power BI · Databricks

Digital engineering 04

Web, mobile and integration builds — APIs and connectors into SAP, Oracle and ServiceNow.

SAP · Oracle · ServiceNow

Work management 05

Smartsheet Platinum Partner: implementation, migration, governance and Smartsheet AI.

Smartsheet · Platinum Partner

Managed support 06

24×7 application and bot support with follow-the-sun cover from India, UAE, UK and the US.

L1–L3 support · SLA-backed

Staff augmentation 07

Vetted engineers, analysts and automation specialists placed into your teams — on your terms.

AI · data · automation · Onshore / offshore

AI skilling & learning 08

Upskilling programmes for enterprises and government — 6,400+ candidates trained for one state.

Corporate learning · Government

HOW WE ENGAGE AND HOW WE BILL

Three ways to work with us. Paid on the result.

ENGAGEMENT MODELS

1

AI Centre of Excellence

A forward deployed pod runs AI across a function as your in-house AI team — multi-year.

2

Service-as-a-Software

Finished work delivered by accelerators — onboarded customers, processed claims, evaluated exams.

3

Embedded via partners

Smartsheet, Worksoft, Deloitte, Accenture and Wipro carry MindMap accelerators into their engagements.

BILLING MODELS

01
Per transaction
A document processed, a cheque cleared, a case closed — metered on volume.

02
Per outcome
A share of the measured saving or recovery — we are paid when it works.

03
Fixed retainer
Annual subscription to the accelerator estate plus the FDE pod that runs it.

NEVER

No seats.
No time-and-materials.
No token bills.

CLIENTS

Trusted by 50+ enterprises across 10 industries

50+
enterprise customers

10
industries served

~100%
logo retention

20+
clients with us for 3+ years

5
countries: India · UAE · UK · Europe · USA

Logos shown are current or past customers; shown for identification only, no endorsement implied. Case studies are anonymised.

CUSTOMER STORIES

Outcomes, not hours — what MindMap OS has already done

Representative deployments across the base. Each ran inside the customer's own environment; each is billed on the result.

US HEALTHCARE SYSTEM
Data-lake consolidation

97%

CSAT improvement · 89% less manual work

US TELECOM MVNO
Touchless accounts payable

36K+

invoices across 90K retail locations · $1.5 M projected 3-yr savings

OEM MANUFACTURER
Touchless SAP invoicing

100K+

invoices processed · 75% productivity gain

GLOBAL TECHNOLOGY GIANT
Collections automation

7 → 1

day cycle time · 95% efficiency

PAN-AFRICAN TIER-1 BANK
Sovereign WhatsApp banking

6 M+

customers · 67% deflection · English + Swahili · air-gapped

GLOBAL PHARMA
QA/QC batch release

628%

ROI · six-month payback

MULTI-SPECIALTY HOSPITAL
Revenue-leakage recovery

$400K

leakage plugged in the first year

AFRICAN TAX AUTHORITY
Compliance intelligence

+31%

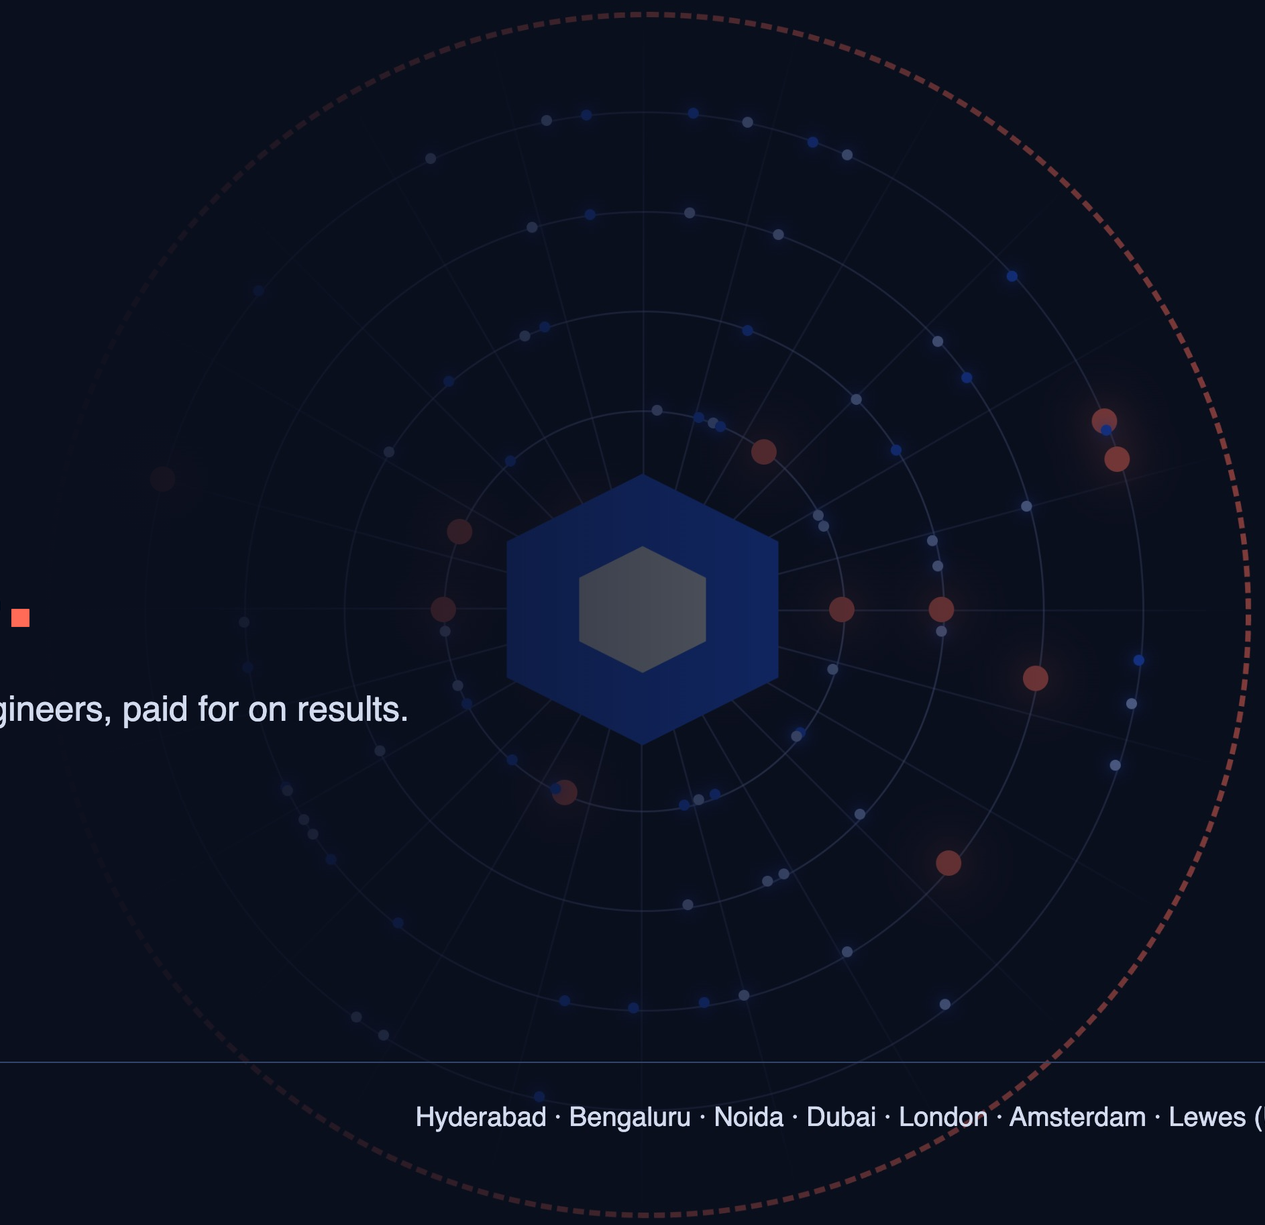

compliance-yield uplift

Outcomes as reported by customers or measured at hypercare; management summaries. Customer names available under NDA.

mindmap ai

Let's put AI inside your walls.

MindMap OS — sovereign AI, installed by forward deployed engineers, paid for on results.
