AI Solutioning Agent: READ ME FIRST

How to use the BRD and the templates in this package

Version 1.0 · 13 October 2026 · Mindmap Digital · Internal

What this package is

This package holds the Business Requirements Document (BRD) for the AI Solutioning Agent, and every format and template the BRD tells the agent to use. The agent does Mindmap Digital's presales solutioning work: intro decks, showing existing demos and videos, transcript-based proposals, RFP-based proposals, RFI clarification questions, commercials, demo builds, demo videos and emails.

This guide explains, in depth:

- what each file is and who needs it;
- what to read in the BRD for your role, and how to read it;
- how to check that a requirement from the brief is covered;
- how every slide template, reference deck slide and architecture format is used, slide by slide;
- how to change the BRD or a template safely;
- what must happen before the agent goes live.

Open first: 01_BRD / AI_Solutioning_Agent_BRD_v1.0.docx. The PDF beside it is the same document, for reading on any device.

Keep the whole package internal. Section 13 of this guide explains why, and what to remove before anything goes outside Mindmap Digital.

1. What is in the package

File	What it is	Who uses it	When
00_READ_ME_FIRST.pdf	This guide	Everyone	Before opening anything else
01_BRD / AI_Solutioning_Agent_BRD_v1.0.docx	The BRD: every requirement, workflow step, rule, check, approval and setting, with diagrams. Editable	Everyone; the build team works from it	Reading, review comments, build
01_BRD / AI_Solutioning_Agent_BRD_v1.0.pdf	The same BRD as a PDF	Readers who do not need to edit	Reading and sharing inside Mindmap
02_Templates / Architecture formats / Solution_Architecture_Format.png	The layout every solution architecture follows (BRD Appendix B.1)	Solution architects; build team	Every intro deck, proposal and RFP-based proposal
02_Templates / Architecture formats / Technical_Architecture_Format.png	The layout every technical architecture follows (BRD Appendix B.2)	Solution architects; build team	Every proposal and RFP-based proposal
02_Templates / Slide templates / 1_Periodic_Table.pptx (supplied as periodic_table_small_detailed)	Use case periodic table	Build team (template library)	Intro deck slide 2
02_Templates / Slide templates / 2_Problems.pptx (supplied as Problems)	The five real problems	Build team	Intro deck slide 3

File	What it is	Who uses it	When
02_Templates / Slide templates / 3_Agents_Slide.pptx (supplied as agents_slide)	One solution per slide	Build team	Intro deck slides 4, 6, 8, 10 and 12; solution slides in PPT proposals
02_Templates / Slide templates / 4_Engagement_Methodology.pptx (supplied as Engagement_Methodology)	How we engage	Build team	Intro deck slide 14 (optional); engagement approach in PPT proposals
02_Templates / Slide templates / 5_Offerings.pptx (supplied as Offerings)	Offering overview	Build team	Intro deck slide 15 (optional)
02_Templates / Reference deck / Reference_Deck_Slides.pptx	A 40-slide past Mindmap client deck. It shows how process flows look, and its title, about us, team, solution, problem, current state, agent portfolio, full-visual, process, capabilities and closing slides are templates too (BRD Appendices B.4 and B.6)	Build team	Title, closing, architecture, process flow and most proposal slides

The five slide templates were renamed with a number so they sort in the order the deck uses them; the name each was supplied under is in brackets, and BRD Appendix B.3 lists both.

2. Start here: what to read for your role

Your role	Read first	Then	What you do with it
Leadership and approvers	Section 2 (executive summary), Section 3 (problem), Section 20 (success metrics)	Section 21 (open questions), Appendix A.2 (additions beyond the brief)	Answer the open questions; keep or strike each addition; decide which workflows form release 1
Presales consultant	Section 4 (deliverables and approvers), Section 5 (routing)	Sections 7, 8, 9, 11 and 16 (the workflows you run); Section 17 (house rules); Section 19 (human gates)	Know what you confirm at RT7 and approve at each gate, and which rules every output follows
Bid owner (RFPs)	Section 10 (RFP-based proposal), Section 13.4 (escalation)	Section 11 (RFI questions), Section 12 (commercials), Section 19 (the W4-10 deviation decision)	Know the five AI checks, how deviations are decided, your proofread at W4-G3 and the release gate W4-G4
Solution architect	Appendix B.1 and B.2 (architecture formats), house rule HR-17 (named data sources)	9.2 and 9.3 (proposal visuals), 10.3 (RFP design), 12.1 (man hours), Section 14 (demo build)	Draw every architecture in the formats with every data source named; approve technical design at W3-G2 and W4-G2
Delivery lead and pricing owner	Section 12 (effort and commercials)	Section 18 (configuration values), 12.4 (the commercials table)	Review man hours at S1-G1; set price, AI reduction, overhead and the infrastructure amount at S1-G2
Build team (engineers)	Section 5 (router), Section 6 (shared foundation), Section 13 (QC engine)	Every workflow table (Sections 7 to 16), Sections 17 to 19, Appendix B	Build the agents, data objects, checkers, gates and configuration exactly as specified
Testers and QA	Section 13 (checkers, QC profiles, exit rule), Section 20 (metrics)	14.3 (demo acceptance), B.5 (test inputs to come)	Write tests against each checker and metric; run the past RFPs through W4 and W5 once uploaded

3. Three common jobs, step by step

Review and sign off the BRD (leadership, about two hours)

1. Read Sections 2 and 3 for the whole picture and the problems the agent solves.
2. Read Section 21. Answer each open question, starting with the readings marked “confirm” (Section 6 of this guide lists them).
3. Read Appendix A.2 and mark each addition keep or strike.

4. Read Section 20 and agree the targets.
5. Send the answers to the BRD owner, who updates the sections the answers touch and ticks the questions in Section 21.

Set up the template library (build team)

1. Load the five files in 02_Templates / Slide templates and the 40-slide reference deck into the template library, one entry per slide type, tagged with the slide type it serves (Section 7 of this guide has the full map).
2. Load the two architecture format images as layout references for the visual engine; they are never placed on a slide themselves.
3. Load the approved company profile (offices, client count, accelerator count, certifications, badges). Every company fact on a slide comes from it (HR-16).
4. Fix the known template issues before go-live: add a description box to column 1 of 2_Problems.pptx; check each template for an expired badge (Section 7.3 of this guide).
5. Test one intro deck end to end and check every slide against Section 7.4 of this guide.

Check that a requirement from the brief is covered (anyone)

1. Open BRD Appendix A.1 and find the requirement by the brief's own words.
2. Read the fourth column: it names the exact section, step, rule or checker that covers it.
3. Open that place. The requirement is specified there in full.
4. If it is not covered, or covered thinly, tell the BRD owner; the fix is added to the section and the row updated.

4. How the BRD is organised

Section	What it holds	Use it when
1. Document control	Version, status, review record, ID legend	You need to know what the IDs mean or what state the document is in
2. Executive summary	The eight workflows, two shared sub-workflows, and why	You need the whole picture in one page
3. Business context	The problems the agent solves and the failure modes F1 to F11	You need to know why a rule exists
4. Scope and catalogue	Each deliverable's trigger, inputs, output and approver; out of scope; roles	You need to know what each workflow needs before it starts
5. Intake and routing	Router steps RT1 to RT8, document classifier, six ordered rules, parameters, follow-ons, routing diagram	You need to know how a request becomes one workflow
6. Shared foundation	Case File, data objects, independent review pattern, shared services, architecture diagram with the named data sources	You are building anything shared
7. W1 Intro deck	Step-by-step flow, pain point rubric, slide-by-slide specification, cold and warm differences, QC profile	You build or review an intro deck
8. W2 Showcase	Picking existing demos and videos	A client asks "show me what you have"
9. W3 Transcript-based proposal	Flow, output variants (PPT or detailed document), visual set, as-is estimation	You build a proposal from calls
10. W4 RFP-based proposal	Stages A to F: consolidate, verify understanding, draft, the five AI checks, first-draft QC and proofread, commercials and release; stage diagram	You respond to an RFP
11. W5 RFI questions	Three agents (answered, relevant, simulate), simplification, QC, cross-check	You prepare clarification questions
12. S1 Effort and commercials	Man hours with QC-1 and QC-2, cost formula, price, standard structure, the commercials table	You price a proposal

Section	What it holds	Use it when
13. S2 QC engine	Checkers D1 to D8, terms, QC profile per deliverable, escalation ESC-1 to ESC-4, exit rule and loop maximum	You build or test a check
14. W6 Demo build	Flow, sub-agent template, UI checklist, construction tender worked example	You build a demo
15. W7 Demo video	Recording, AI voiceover, editing, platform-hiding check	You make a demo video
16. W8 Emails	Email types and the checks against odd AI emails	You draft an email
17. House rules	HR-01 to HR-17, each with where it applies and what checks it	You need the non-negotiables
18. Integrations and configuration	Tools, named data providers and every configurable value	You set up or change a value
19. Non-functional and gates	Performance, security, data handling, every human gate	You build infrastructure or approvals
20. Success metrics	What is measured and the targets	You judge whether the agent works
21. Risks and open questions	Risks, assumptions, the questions the team must answer	Before go-live
Appendix A	A.1: all 272 requirements mapped to where they are covered; A.2: what was added beyond the brief	You check coverage or add a requirement
Appendix B	Formats, templates, previews, pending inputs, reference deck slide map	You build any slide or diagram

5. How to read the BRD

Workflow tables. Every workflow is a table with five columns: the step ID, the agent that does it, what it does, its output, and its rule or guard. Read across a row to see one step completely; read down the table to see the order. “No step-specific rule” in the last column means the step follows only the house rules and its QC profile.

IDs used throughout

ID	Means	Defined in
W1 to W8	The eight deliverable workflows; W3-9 is step 9 of W3	Sections 7 to 16
W3-G1, W4-G3 and similar	Human gates: a person must approve before the work moves on	Each workflow table; all listed in Section 19
S1, S2	Shared sub-workflows: effort and commercials (S1), QC engine (S2)	Sections 12 and 13
RT1 to RT8	Router steps	Section 5.1
D1 to D8	The eight checkers: compliance, contradiction, consistency, scope and promises, visuals and tables, proofread, commercials, source check	Section 13.1
ESC-1 to ESC-4	Escalation protocol when a contradiction or serious human finding appears	Section 13.4
HR-01 to HR-17	House rules every output follows	Section 17
F1 to F11	Failure modes the design prevents	Section 3
N-01 to N-09	Non-functional requirements	Section 19
QC-1, QC-2	The two man-hours checkers	Section 12.1

Markers in the text. “(added; see A.2)” means the item goes beyond the brief and is listed in Appendix A.2 for the team to keep or strike. “To set” in Section 18 means a value the team must supply before go-live. “Proposed” means a tool or provider the brief did not name, to confirm.

6. Using the requirement matrix (Appendix A)

Appendix A.1 maps all 272 requirements taken from the brief to where the BRD covers them. It was built clause by clause from Message 1 (every failure mode, example and number is its own row), then Messages 2 to 8, the attached formats and templates, the team’s standing preferences, and every order of steps the brief gives.

Kinds of row

Row starts with	It comes from
A quotation	Message 1, in the brief's own words, with filler words ("uh") and repeated words left out; "…" marks a longer cut
"Msg 2" to "Msg 8"	The follow-up messages
"Attachment:"	The formats, templates and reference deck sent with Message 5
"Pref:"	The team's standing preferences
"Order:"	An order of steps the brief gives (intro deck, transcript pipeline, proposal contents, RFP checks, commercials, RFI agents, demo)

Status column. "Covered" means fully specified. "Covered; confirm this reading" marks the ten rows where the BRD had to interpret the brief; each has a matching question in Section 21:

Rows	The reading to confirm
32	Proposal types: transcript-based (W3) and RFP-based (W4); are there more?
85, 87, 92, 112, 113, 256, 258	The proofreading checks: the two things are the AI checks and the team's own proofreading; check three is the contradiction agent doing what the team's own proofreading finds; checks four and five are the internal consistency check run two times
159, 160	The word "flooring" in the construction sequence

"Covered; code upload pending" (row 185) waits on the tender agent code (B.5).

To add a requirement: specify it in the right section first. Then add a row at the end of A.1 with the next number, the requirement's own words, what it requires, where it is now covered, and its status, and update the count in Section 1 and in the A.1 introduction. Something the brief did not ask for goes in A.2 instead.

7. Using the slide templates

7.1 The rules for every slide

Rule	What it means in practice	House rule
Edit, never create	Every slide is a duplicate of a provided template slide. Copy the template slide, then change it. Never build a slide from a blank layout	HR-12
Text and images only	Change or remove words and pictures. Never change font sizes, fonts, colours, positions or formatting	HR-12
Nothing of the old content survives	Every template carries text, figures, names and badges from an earlier pursuit (some under NDA). All of it is replaced or removed; checkers D4 and D6 confirm no template text remains	HR-16, D4, D6
Company facts only from the approved profile	Offices, client count, accelerator count, certifications and awards come only from the approved company profile; an expired badge is removed	HR-16
No em dashes	Slide text never uses the long dash, including any left in a template	HR-09
No POC content in use case slides	No proof of concept content or POC timings	HR-07
Use cases stated directly	Never labelled "illustrative", "hypothetical" or "not a client case"	HR-08
Build platform never named	The platform used to build demos is never named or visible in client content	HR-03
Prices in one place	Prices appear only in the one commercials table	HR-05
Missing template	If a slide type has no template, the deck holds and the consultant is asked for one; the agent never makes one up	HR-12

7.2 How a template slide is edited

1. Duplicate the template slide from the library (or from the reference deck slide named for it).
2. Replace every text box's words, keeping the box, its font, size and colour.
3. Replace pictures (a product screen, a diagram, a logo) at the same size and position. On reference deck slides 8, 10 and 12 the whole visual is one picture: the visual engine renders the new diagram at the same size (13.33 by 4.68 inches) and swaps it in.
4. Remove what does not apply (an expired badge, an unused marker such as "UI SCREEN NEEDED") rather than leaving it.
5. Place tables a reader must read or copy, such as the commercials table and the W4 compliance matrix, as native PowerPoint tables in the visual area, not as pictures.
6. Check the slide: no template text left, no em dash, every figure sourced, nothing moved or resized.

7.3 Template by template

File	Slide	Replace	Watch for
1_Periodic_Table.pptx	Intro deck slide 2: the use cases that can be done at this company	Every tile: code, two-letter symbol, agent name, one-line description written for this company; tiles grouped by function; the title, category legend, section banners and the counts strip	Tiles come from the accelerator catalogue, filtered to what the research shows the company runs. The template has twelve starred tiles: remove every star except the five priority tiles, write each one's number in its star box (for example "★1", matching slide 3), and set the "Featured" count to 5. No generic AI tiles (W1-7, W1-8)
2_Problems.pptx	Intro deck slide 3: the five real problems	Five columns: number, title, why it is a real problem for this company, the evidence figure or quote, and its source; the quote strip at the foot	The source line reads "Source: [speaker], [where], [date]"; the template's source lines put a long dash before the source name, and are rewritten without it. Column 1 (Pain 01) has no description box: until the team adds one, problem 1's explanation goes in the quote strip, and the problem with the shortest explanation goes in column 1. Every problem must be one the company itself has stated (W1-6, D8)
3_Agents_Slide.pptx	One solution per slide: intro deck slides 4, 6, 8, 10 and 12; solution slides in PPT proposals	Headline, one-line summary, three value figures, six icon items, the product screen, the green title line and the "Strategic Rationale" pill	Icon items: 1, the problem and its source; 2 to 4, how it works; 5, the accelerator; 6, the value. The template's content is a confidential pitch: replace all of it. The green title line runs past the slide's left edge, so the new title is fitted inside the slide. A "UI SCREEN NEEDED" marker sits behind the screen: put a real screen from the matching library demo there, never a mock-up. Each value figure has a cited source or is marked approximate (7.2, D8)
4_Engagement_Methodology.pptx	Intro deck slide 14 (optional); engagement approach in PPT proposals	Four phases with their activities and outputs for this solution; the quote strip	No POC content or timings. In an intro deck the phase timing labels are removed (there is no plan yet); in a proposal they are set from the approved Gantt and checked in the deep QC
5_Offerings.pptx	Intro deck slide 15 (optional)	The central offering and its eight surrounding items (four components, three phases, scale and impact)	The template names an earlier client's programme and figures: replace all of it. No POC content; phase timings removed

7.4 The intro deck, slide by slide

Slide	What it is	Copied from
1	Title: company name, Mindmap Digital, the deck date	Reference deck slide 1
2	Use case periodic table, the five priority tiles starred and numbered	1_Periodic_Table.pptx
3	The five real problems, each with its source	2_Problems.pptx
4, 6, 8, 10, 12	One solution per slide	3_Agents_Slide.pptx
5, 7, 9, 11, 13	The architecture of the solution before it, in the B.1 format, every data source named	Reference deck slide 8 (full-visual slide)
14 (optional)	How we engage	4_Engagement_Methodology.pptx
15 (optional)	Offering overview	5_Offerings.pptx
16	Next steps: a conversation, with the relevant demos named; no free demo or POC	Reference deck slide 40

Cold and warm decks have the same slides; a warm deck also draws on the earlier conversation and opens slide 3 by referring to it (BRD 7.2).

7.5 The reference deck

The reference deck is a past Mindmap client deck. It shows what good process flows look like, and several of its slides are templates in their own right.

Reference deck slide	Use it for
1 Title	Intro deck slide 1; first slide of a PPT proposal
2 About us	“About Mindmap” in a PPT proposal; figures, badges and certifications from the approved company profile
3 Founding team	Leadership slide in a proposal, only when the client asks who leads the work
4 Our solution	Solution overview in a PPT proposal
5 Where it breaks	Understanding of the need
6 Current state	Executive summary (no prices); assumptions and exclusions
7 Agent portfolio	Agent landscape, when the solution spans several areas
8 Full-visual slide	Any slide that carries one visual: every architecture, the heat map, Gantt, RACI, ROI waterfall, the commercials table and the W4 compliance matrix
9 and 11 Process summary	The “today” and “on the platform” summary of each process
10 and 12 Swimlanes	The current and target process flows
39 Capabilities	Optional capability slide
40 Closing	Intro deck slide 16; last slide of a PPT proposal; offices and contacts from the approved company profile

Slides 8, 10 and 12 hold their visual as one picture, so new visuals are rendered as images and swapped in (Section 7.2 of this guide). A diagram too dense for one slide, such as a nine-layer technical architecture, is laid out landscape or continued on a second copy of slide 8.

Slides 13 to 38 repeat the process slides for the earlier pursuit’s other processes (summaries and swimlanes for processes 2 to 5, summaries only for processes 6 to 10). They show the format at scale; they are not separate templates, and none of their content is reused.

7.6 A PPT proposal, slide by slide

Used by W3 and W4 when the proposal is delivered as a PPT (the format bands in BRD 5.4 decide this; a buyer’s own format always wins in W4).

Proposal slide	Copied from
Title	Reference deck slide 1
About Mindmap	Reference deck slide 2

Proposal slide	Copied from
Leadership (optional)	Reference deck slide 3
Executive summary (no prices)	Reference deck slide 6
Understanding of the need	Reference deck slide 5
Solution overview	Reference deck slide 4, then 3_Agents_Slide.pptx once per solution
Agent landscape (when needed)	Reference deck slide 7
Solution architecture (B.1)	Reference deck slide 8
Technical architecture (B.2)	Reference deck slide 8
Process flows	Reference deck slides 9 to 12, per process; the heat map on slide 8 when the solution spans several areas
Timeline (Gantt), governance (RACI), ROI waterfall (if data exists)	Reference deck slide 8, one each
Commercials	Reference deck slide 8, the commercials table as a native table
Compliance matrix (W4)	Reference deck slide 8, as many copies as it needs
Assumptions and exclusions	Reference deck slide 6
Engagement approach	4_Engagement_Methodology.pptx, timings from the approved Gantt
Capabilities (optional)	Reference deck slide 39
Close	Reference deck slide 40

Optional slides are proposed by the agent and confirmed by the consultant, or the bid owner for an RFP, when the request is confirmed (RT7), and again at the release gate.

7.7 Process flows

Each process gets four slides, copied from reference deck slides 9 to 12: a “today” summary and a current-process swimlane, then an “on the platform” summary and a target-process swimlane. Current-process cards are tagged with the client’s own user role or system; target-process cards carry the platform component and the user role served, so each user’s value is visible. The step where the process breaks is tinted red; agent steps are tinted amber. In a detailed document the same panels appear as figures. Full rules: BRD Appendix B.4.

8. Using the architecture formats

The two .png files are layout guides, not content. Their headers, layers and items come from earlier pursuits and are never copied.

Solution architecture (Appendix B.1). Title “Solution Architecture” with an orange subtitle that states the point; a lead paragraph; a left column of navy layer tiles (sources, capture and ingestion, core services, intelligence, governance and security, delivery, deployment, adapted to the solution); each layer a tinted panel of groups with icons and short names; arrows only where one group really sends to another, each labelled with what flows; dashed lines for controls across every layer; a legend at the foot.

Technical architecture (Appendix B.2). Title “Technical Architecture”; layers from clients through hosting; each item an icon, the component name and a grey line naming the indicative technology; real dependencies only, labelled; a request-flow strip; a legend. The text beside it goes deep (data contracts, models, schemas, APIs, failure handling, security, observability), documents each use case as its own flow and explains every technology it names.

Named data sources (house rule HR-17). Every data source in every solution architecture is named, including sources on the web, and the technical architecture uses the same names:

Write	Never write
“SAP S/4HANA: vendor master, open purchase orders”	“ERP”
“Tender PDFs from the buyer’s e-procurement portal”	“Data sources” or “Enterprise systems”

Write	Never write
“Distributor price catalogue, Excel, monthly upload”; “LME: copper and aluminium prices, daily”	“Price catalogue” or “Web data”
“NewsAPI.org: company and sector news”	“News API” or “Third-party APIs”

Names come from the client’s own sources (call transcripts, RFP, RFI answers, research) and are cited. If no source names a system, the architect proposes the most likely one and flags it; the gate (W1-G2 for an intro deck, W3-G2 or W4-G2 for a proposal) confirms or replaces it, or the question goes to the client. The visuals checker (D5) fails any architecture with an unnamed source, and Section 20 counts them, with a target of zero. The BRD’s own architecture diagram (Section 6) follows the same rule: tl;dv, client documents, Claude web search, LinkedIn, the knowledge base, NewsAPI.org and the cloud price lists are each named.

9. Using the commercials rules

The one commercials table (BRD 12.4) has Mindmap’s charges first: the one-time implementation fee; annual maintenance at 20% of the implementation fee, compulsory; and a revenue share only for platform or SaaS builds. Then two to three blank rows. Then the infrastructure row, shaded and bold, stating “Charged as actuals. Billed directly to you, not by us (Mindmap Digital)”. Its amount is an indicative figure most of the time, or “At actuals” when the pricing owner decides at S1-G2 not to give one. Any other charge a third party bills directly (a software licence, a paid data feed) gets its own row under it in the same style.

No price appears anywhere else, and no internal basis (man hours, rates, overhead, AI reduction, margin) appears in any client output. In an RFP-based proposal, a buyer’s mandated price schedule replaces the table; the rules apply wherever its format allows, and if it asks for effort or rates, the pricing owner decides at S1-G2 what is shown.

10. For the build team: turning the BRD into the agent

1. **Shared foundation first** (Section 6): the Pursuit Case File, the data objects in 6.2, the independent review pattern in 6.3 (fresh context, coverage logs, no reuse of earlier reasoning) and the shared services in 6.4.
2. **Platform pieces** (Section 18): the agent workspace where consultants make requests and approve, identity and roles (internal cost data visible only to the roles in N-04), and the model and orchestration runtime. All are Must; the tools are to confirm.
3. **Configuration store** (Section 18): every rate, percentage, band, threshold, count, cap and loop maximum is configuration. Nothing is hardcoded (HR-13). Fill every “To set” value before go-live.
4. **Router** (Section 5): RT1 to RT8, the six rules in order, the confirmation card, and follow-ons.
5. **QC engine** (Section 13): the eight checkers, the QC profile per deliverable (13.3), the exit rule, the loop maximum (a stage that reaches it stops and a human decides) and the escalation protocol. House rules (Section 17) become checkable patterns.
6. **Workflows** (Sections 7 to 16) in the order the team sets for release 1 (an open question in Section 21). Build every step, output, guard and gate exactly as the workflow table states.
7. **Template library**: load the templates as in Section 3 of this guide. Until the Word proposal template arrives (B.5), a detailed document holds at the drafting step and asks for it; the agent never invents a layout.
8. **Acceptance**: test against the Section 20 metrics, the demo acceptance criteria in 14.3, and the two past RFPs with their RFI question sets once uploaded (B.5).

This order is a suggestion; the team decides release 1.

11. Changing the BRD or the templates

Change	Do this
A template or format changes	Replace the file in the template library and in 02_Templates; it is a configuration change, not a rebuild. Update the matching row in Appendix B
A new requirement	Specify it in the right section, add a row to A.1 (Section 6 of this guide), and update the requirement count
A value changes (rate, band, cap)	Change it in the configuration store and in the Section 18 table; never in code
An addition is struck	Remove it from the section that holds it and from A.2
An open question is answered	Tick it in Section 21 and update the section it refers to, and the A.1 status if it is one of the ten readings

Keep step IDs stable: other sections, the checkers and the matrix refer to them.

12. Before go-live

- Answer the open questions in BRD Section 21: proposal types; the proofreading reading; format bands and the client-size threshold; currency of the 750 rate; the QC exit rule, loop maximum and RFI question cap; the template mapping; release 1; the word “flooring”.
- Set every “To set” value in Section 18, including the AI reduction ranges, scoring weights, specificity bar, revenue share models, infrastructure unit rates and the maximum loops per stage.
- Confirm the tools and providers marked proposed: knowledge base location, diagram tool, voiceover and editing, email system, agent workspace, identity, model runtime, web search, news and pricing providers.
- Fix the Problems template (a description box in column 1) and check every template for expired badges.
- Keep or strike each addition in Appendix A.2.
- Upload the pending inputs (B.5): the tender bidding agent code, the Word proposal template, and two past RFPs with their RFI question sets and final responses.

13. Confidentiality

Keep this whole package internal. The reference deck is a real client deck; the templates and format images carry real client programme names, figures, contact details and material under NDA; and the BRD previews them in Appendix B. Before anything goes outside Mindmap Digital, remove the 02_Templates folder and redact the previews in Appendix B.
